OTHER ANNUAL UNIFORM CRIME REPORTING PUBLICATIONS:

Crime in the United States
Assaults on Federal Officers
Law Enforcement Officers Killed Summary

FOREWORD

Although often viewed as the terrorist's method for inflicting death and destruction on our society, explosive and incendiary devices have become relatively standard weapons employed by vengeful individuals seeking retribution against their personal enemies. Regardless of the motivation for these vicious attacks--for example, to intimidate individuals, disguise other crimes, or retaliate for perceived injustices--bombings extract a heavy toll from our citizens in terms of lost lives, personal injuries, and destroyed property.

For the past decade, this publication has been produced to focus attention on these malicious crimes and perhaps hasten their reduction. As more knowledge about these attacks is gained and further study is made, it is hoped more effective measures can be taken to protect our society.

While 1981 recorded the lowest number of bombings for the last 10 years, we must not falter in our determination to eradicate these destructive acts. If we fail to carry on our efforts to deter these violent crimes, the bomber will remain a menacing force that plagues our Nation.

SUMMARIES OF SELECTED INCIDENTS..... 25

METHODOLOGY

Presented in this publication are statistics on actual and attempted bombing incidents reported to the FBI. The compilations include illegal detonations of explosive bombs or ignitions of incendiary devices which constitute violations of Federal, state, or local laws. Excluded from the tabulations are recoveries of explosive or incendiary bombs, hoax devices, accidental explosions, threats to bomb, and such misdemeanor violations as the illegal use of fireworks.

Bombing incidents occurring in the United States, the Virgin Islands, and Puerto Rico are reported to the Uniform Crime Reporting Program by FBI field divisions. Considerable assistance, particularly in cases where the absence of a Federal violation precludes FBI investigation, is provided by local and state public safety agencies who inform the FBI of such attacks. Also providing information is the Department of the Treasury's Bureau of Alcohol, Tobacco and Firearms which advises the FBI of bombings coming to its attention. While every effort is made to obtain information on all bombing incidents, it is necessary to point out that not all such attacks are reported to law enforcement agencies, or in rare instances, those reported to the agencies may not come to the attention of the FBI.

Since this document has now been published for a decade, statistics for the 10-year period, 1972-1981, are presented in tabular and graphical form. It should be noted that data concerning terrorist bombing incidents included in this publication were provided by the FBI's Terrorist Research and Analytical Center which compiles and maintains the information.

GLOSSARY OF TERMS

Actual bombing: An illegal detonation or ignition of an explosive or incendiary device. Included is the premature detonation or ignition of a device while it is being prepared, transported, or placed.

Attempted bombing: An unsuccessful attempt to illegally detonate or ignite an explosive or incendiary device. The failure of a device to detonate or ignite results from the malfunction of the device or the disarmament of the device prior to detonation or ignition.

Death: The number of law enforcement officers, firemen, intended victims, innocent bystanders, and subjects (bombing perpetrators) killed as a result of bombing incidents.

Explosive bombing: An illegal detonation or attempted detonation of a device constructed with high or low explosive materials.

Incendiary bombing: An illegal ignition or attempted ignition of a device constructed with flammable materials designed to produce a burning effect. Since incendiary bombings are commonly referred to as "firebombings," they are often considered to be arsons. However, the use of a bona fide device, regardless of the intent or resultant effects, is considered to be a bombing.

Motive: The impulse, emotion, or desire that moves a person to perpetrate a violation of a Federal, state, or local law pertaining to the illegal detonation of an explosive bomb or ignition of an incendiary device.

Personal injury: The number of law enforcement officers, firemen, intended victims, innocent bystanders, and subjects (bombing perpetrators) sustaining injuries as a result of bombing incidents.

Property damage: The estimated dollar value of damage to property caused by an explosive or incendiary bombing incident.

Time: The time of day when an actual bombing occurs. In the case of an attempted bombing, the time of day when the device is discovered after it malfunctions, or the time of day when a device is found and dismantled prior to detonation or ignition.

COMMENTS

Bombings declined 9 percent in 1981 as compared to 1980. The 1981 total (1,142) was the lowest reported since the data collection was initiated in 1972 and was down 45 percent from the record 1975 experience of 2,074 incidents. Since 1976, the number of bombing incidents declined in every year except one. In 1976, such attacks decreased 24 percent; in 1977, 16 percent; in 1978, 1 percent; and in 1979, 6 percent. In 1980 (the only year in this period to show an increase), bombings rose 2 percent over the previous annual total.

A comparison of the types of bombings during 1980 and 1981 showed changes in the number of actual versus attempted and explosive versus incendiary bombings. Actual bombings decreased 12 percent in volume, while attempted bombings rose 11 percent. The number of explosive bombings decreased 13 percent in 1981, but the occurrence of incendiary incidents increased 1 percent.

Although the volume of bombing incidents during 1981 was the lowest for the past 10 years, 30 people lost their lives and 133 were injured as a result of the attacks. Only 3 years recorded higher death tolls--1975 with 69 fatalities, 1976 with 50, and 1980 with 34. In connection with the 30 deaths reported in 1981, 13 of those killed were bombing perpetrators themselves, another 13 were intended victims, 3 were innocent bystanders, and 1 was a fireman. Of the 133 people suffering injuries, innocent bystanders and public safety officers comprised 38 percent. Intended victims and perpetrators accounted for the remaining 62 percent.

Care must be taken when comparing dollar estimates of property damage for 1981 with those of previous years. One incident occurring in 1981 resulted in an estimated $45 million damage, representing more than two-thirds of the $67 million total. This

incident also resulted in military facilities--targets of 5 total attacks--showing the highest amount of property damage of all targets. As in the previous year, residences and commercial operations jointly comprised over half of the bombing targets in 1981.

For the past decade, 15,835 actual and attempted bombings have occurred in the United States, Puerto Rico, and the Virgin Islands. Regionally, the Western States recorded the most with 37 percent of the total; the North Central and Southern States followed with 24 percent each. The Northeastern States reported 13 percent and Puerto Rico and the Virgin Islands accounted for the remaining 2 percent.

California led the Nation with 3,781 attacks, nearly two-thirds of the total bombings that occurred in the Western Region. Illinois and Ohio followed with over a thousand bombings in each state. Their combined total represented over half of the incidents occurring in the North Central Region.

When comparing the two 5-year periods, 1972-1976 and 1977-1981, the Western Region showed the greatest decline in the number of bombing incidents, 41 percent. The Northeastern States followed with a 38-percent decrease. The North Central States recorded a 34-percent drop, and the Southern States registered a 26-percent decline. In Puerto Rico, the number of incidents was virtually the same during the two 5-year periods.

Thirty-nine percent of the bombing incidents in 1981 occurred in cities with over 250,000 inhabitants; cities with populations under 10,000 followed with 19 percent of the total. Although most population groups recorded significant decreases in 1981 as compared to 1980, attacks occurring in rural areas doubled in volume, and cities with 25,000 to 50,000 inhabitants reported an 18-percent rise.

The month of April recorded the highest number of bombings for 1981, a total of 111. The lowest volume occurred in November with 76. Among the days of the week, Friday recorded the highest count, 182. The lowest, 143, was registered by both Tuesday and Wednesday. Nearly 4 of every 5 bombings were perpetrated between the hours of 6:01 p.m. and 6:00 a.m.

According to statistics supplied by the FBI's Terrorist Research and Analytical Center, terrorist groups claimed responsibility for 33 of the 1,142 bombing incidents reported in 1981. Four people were injured and one was killed as a result of these attacks which were directed at a variety of targets. As compared to 1980, bombings claimed by terrorist groups rose 65 percent in 1981, while casualties resulting from such incidents dropped 64 percent. For the years 1978-1981 (the only period for which such information is available), responsibility for 147 bombings, or 3 percent of the 4,912 total, was claimed by terrorist groups. During this 4-year span, the Northeastern States and Puerto Rico jointly reported 73 percent of the claimed attacks. The West, South, and North Central Regions collectively accounted for the remaining 27 percent.

1981: 33

SELECTED BOMBING INCIDENTS - 1981

Illinois

During the early morning hours of January 7, a rocket was fired into a private residence in Elmhurst. Upon hearing glass break, the victim awoke and attempted to throw the device outside. The rocket exploded injuring him and causing a fire which resulted in an estimated $30,000 in property damage. Investigation revealed the homemade device consisted of explosive powder. Two subjects have been identified in connection with the incident, and personal animosity has been cited as the motive.

Puerto Rico

A military facility near San Juan was the target of a bombing attack on January 12. During the early morning hours, members of a pro-independence extremist group allegedly penetrated the defenses of the facility and placed 21 explosive devices on 12 aircraft, a utility trailer, and a pickup truck. Eighteen of the bombs detonated, resulting in an estimated $45 million property damage. The following day, an anonymous telephone caller informed the news media that the extremist group claimed responsibility for the bombing. The attack was apparently perpetrated in protest of a military draft.

Kentucky

On January 23, two 20-year-old males were seriously injured when the homemade bomb they were transporting prematurely exploded. After placing the device on the rear floor of their automobile, the males drove to a gas station in Muldraugh. There the device, containing explosive powder, unexpectedly detonated and caused $1,000 damage to the vehicle. The motive for constructing the device is unknown.

Oklahoma

Strong City was the scene of an incendiary bombing on February 2, when two Molotov cocktails were thrown at a vacant travel trailer. One device ignited and destroyed the trailer valued at $10,000; the other, which did not ignite, was found under an Oklahoma Highway Patrol vehicle parked near the trailer. The subjects responsible for the incident have not been identified; however, revenge has been established as a possible motive.

Oregon

On February 21 at approximately 9:00 p.m., an explosion occurred at the Sorosis City Park in The Dalles. The device, a pipe bomb, had been placed on the skylight of a public restroom. No one was injured, but the blast caused an estimated $1,500 in damage to the structure. The motive appears to have been vandalism, although no suspects have been identified.

Ohio

An Ohio Highway Patrol cruiser was the target of an early-morning bombing on February 25 in Champion Township. A box, believed to have contained dynamite, was placed under the vehicle and set off by remote control. Flying debris sliced power lines, caused $4,000 damage to a nearby residence, and destroyed the patrol cruiser. There were no injuries in the bombing. No suspects have been developed, but personal animosity appears to have been the motive.

California

While making his early morning rounds on March 10, a security guard for an industrial plant in Chino noticed smoke coming from one of the plant's press machines. As he approached the machine, a pipe bomb on top of it exploded, seriously injuring him. A few seconds later, a second pipe bomb detonated on another press machine. Damage to both machines totaled approximately $40,000. The motive appears to be labor related, but no suspects have been developed.

Pennsylvania

During the early morning hours of March 15, an alleged racketeering official was killed when his residence in Philadelphia was bombed. The device, an unknown explosive wrapped in nails, had been placed on the porch of the residence and set off by remote control. The resulting blast caused an estimated $250,000 in property damage to the dwelling and surrounding area. Apparently the attack was triggered by an indictment charging the victim with racketeering. No suspects have been developed.

New York

On March 17, the New York City Police Department received an anonymous telephone call reporting a suspicious package located in front of a commercial building. Two officers responded to the call, and as they approached the package, it exploded, seriously injuring them. The device, a time bomb, had been put inside a shopping bag and placed on the stoop of the business. No motives or suspects have been determined.

Missouri

During the early morning hours of March 21, two banks in Saint Francois County were the targets of explosive bombings. At approximately 3:55 a.m., a device, believed to have been dynamite, was placed in a Leadington bank's night deposit box. The resulting explosion caused extensive damage estimated at $100,000. A second incident caused an estimated $12,000 in damage to a Desloge bank. The device, also dynamite, had been placed inside the bank adjacent to the safe. No suspects have been identified for either bombing, but monetary gain appears to have been the motive in each incident.

Mississippi

A Molotov cocktail was thrown through the front bedroom window of a private residence in Madison on April 11. The device burned the window area and caused about $1,000 in property damage. A possible motive for this incident is intimidation as the victim, a business owner, had recently withdrawn from the union. No suspects have been determined.

Nevada

On April 17, an explosion occurred on land owned by the United States Forest Service in Rye Grass Springs Township. The device had been placed on the Forest Service's watering system used to supply area livestock. Damage to the system was estimated at $5,000. One suspect has been identified.

Washington

Two suspects have been identified in the April 19 bombing of a church in Tillicum. The device, a military grenade simulator, had been placed against the door while church services were being conducted. Two members of the congregation received minor injuries from the explosion, and property damage was estimated at $250. The attack appears to have been racially motivated.

Alabama

A wooden bridge in a remote area of Mobile County was the target of a bombing on April 25. An unknown suspect had placed dynamite in a culvert under the bridge. The blast caused an estimated $1,800 in damage. No motive has been established.

Florida

The security office of a Melbourne college was the target of an explosive bombing on May 8. A pipe bomb filled with black powder was thrown through the front office window, causing an estimated $5,000 property damage. Although no suspects have been developed, retaliation for the tightening of campus security by a newly appointed security chief is a possible motive.

Ohio

Shortly after midnight on May 9, an explosion, resulting in a fire, occurred at one of Akron's largest churches. After a local fire department extinguished the flames, it was determined that an incendiary device was used to set the fire. Property damage to the church, which is known to be affiliated with a large conservative movement, was estimated at $10 million. No motive or suspects have been developed.

Florida

On May 27, two people were injured in an explosion when they opened the door of their apartment in Gainesville. Investigation revealed an improvised pipe bomb containing black powder was activated by opening the door. The resulting explosion caused $2,000 in property damage, but the persons responsible and their motive for the bombing are unknown.

Illinois

A tavern located in Chicago was the scene of a bombing on June 15. The device, a pipe bomb, was thrown inside the building where it exploded resulting in minor injuries to five patrons. Three suspects have been identified in connection with the incident, which appears to have been racially motivated.

Maryland

An explosion occurred at the municipal building in College Park on June 27. The device, an unknown explosive, had been placed on the air-conditioning unit located on the outside of the building. One of three students injured while walking by the building at the time of the explosion died later due to his injuries. Damage to the building was estimated at $50,000. The motive for the bombing is unknown, and no suspects have been identified.

California

On June 28, an unknown individual telephoning a local Berkeley news station stated he had planted a bomb at a public building. Approximately five minutes later, an explosion occurred at the telephone company building, causing $10,000 in damage. The device, a timed pipe bomb, had been placed inside the walk-up payment window. Two days after the bombing, the same individual called the news station again and was arrested in the process. No one was injured in the attack, and revenge appears to have been the motive.

Alabama

Two persons were killed on July 11 when an unknown explosive device detonated in the bedroom of their private residence in Red Bay. The blast caused an estimated $10,000 in property damage. Although no suspects have been developed, personal animosity seems to have been the motive.

Idaho

On July 14, an explosive device was placed under an automobile parked in the driveway of a private residence in Bonners Ferry. The device, believed to have contained dynamite, detonated shortly after midnight totally destroying the car valued at $4,500. While no injuries resulted from the attack, the explosion shattered the windows of the residence and garage, causing an estimated $500 property damage. Personal animosity appears to have been the motive but the subjects involved are unknown.

Tennessee

A club in Oak Ridge was heavily damaged when three explosive devices detonated during the early morning hours of July 15. The devices, containing dynamite, had been placed inside the club by an unknown individual.

The resulting blast and fire caused approximately $70,000 property damage. Fortunately, no one was injured as the club was closed at the time of the bombing. No motive has been established for the attack.

Utah

On August 3, six charges of dynamite were placed in various points on a bridge near Green River. Five of the charges detonated causing $25,000 damage. The sixth was blown clear of the bridge and was dismantled by bomb technicians. It was later determined that the dynamite had been stolen from a business in the area. Vandalism appears to have been the motive, and four juvenile suspects have been identified in connection with the incident.

Minnesota

During the early morning hours of August 17, an unknown subject threw an explosive device through the glass ticket window of a theater in Minneapolis. The pipe bomb rolled into the concession stand area where it exploded causing $25,000 damage to the building. The incident appears to be racially motivated as racial slurs had been painted on the outside of the theater.

Tennessee

During the early morning hours of August 21, five businesses in Memphis were the targets of apparently related fire bombings. Molotov cocktails thrown through the front windows of the stores, which were located in different parts of the town, caused property damage estimated at $96,500. The motive appears to have been vandalism, although no suspects have been identified in connection with the attacks.

Arizona

On September 10, a van containing four members of a religious cult exploded while en route to Sierra Vista. Allegedly, the group, armed with various firearms and explosive devices, was travelling to an area prison to demand the release of jailed cult members. One of the devices, consisting of dynamite, prematurely detonated while on the lap of a male passenger, killing him instantly. The other three passengers were severely injured, and damage to the van was estimated at $5,100.

Tennessee

A resident of DeKalb County was seriously injured upon attempting to enter his home on September 11. Investigation revealed that an explosive device had been placed on the front door of the residence and detonated when the door was opened. The blast and resulting fire caused an estimated $20,000 property damage. The motive for the attack is unknown, and no suspects have been determined.

Ohio

A commercial building in Cleveland was the target of a bombing on October 26. Two dynamite devices were detonated by a side door and window of the vacant business. Resultant property damage was estimated at $100,000. No suspects have been identified, but the motive appears to have been intimidation.

Georgia

A Molotov cocktail was used in an October 27 attack on a private residence in Port Wentworth. Although the dwelling was occupied at the time of the attack, no one was injured. Property damage has been estimated at $18,000. Three persons were arrested in connection with the bombing, and personal animosity appears to have been the motive.

Alabama

An electrical transformer located outside a commercial building in Pride was the target of a bombing on October 31. During the late evening hours, an explosive device was placed on the transformer and upon detonation caused an estimated $64,000 in property damage. Although no suspects have been developed, the motive may have been labor related as the company has been experiencing difficulties with striking employees.

Oklahoma

Revenge was the apparent motive for the November 1 bombing of a pickup truck in Tulsa. A box containing dynamite had been placed on the hood of the vehicle which was parked in the carport of a private residence. The blast caused $6,000 damage to the truck and approximately $4,000 property damage to the carport. Several months before, the owner of the truck had testified against a relative in divorce proceedings.

Kansas

On November 1, a restaurant in Newton was destroyed by an incendiary device which had been placed inside the business and ignited. No one was injured, but property damage was estimated at $300,000. Monetary gain appears to have been the motive, as the restaurant was in deep financial trouble. No suspects have been identified.

Louisiana

On November 10, an attempt was made to bomb a power facility in a rural area near Bastrop. After discovering that the substation had been forcibly entered, an employee found an explosive device on top of a cabinet. Its fuse had been lit but had burned out before the device could function. Area police removed the bomb and dismantled it for further investigation. Both motive and suspects are unknown.

Puerto Rico

On November 27, two electrical substations in the Condado area of San Juan were the targets of bombing attacks. Two explosive bombs had been placed at each substation and were set off by timing mechanisms. The blasts, which shut off power to area residents for several days, caused approximately $2.7 million total property damage. The motive appears to have been sabotage as a pro-independence extremist group claimed credit for both attacks.

North Carolina

An apartment building in Wrightsville Beach was destroyed by an unknown explosive device on December 6. The blast resulted in a fire which killed one volunteer fireman and critically injured another. Property damage to the structure has been estimated at $750,000. The motive and suspects for the attack are unknown.

Wisconsin

During the early evening hours of December 11, an explosion occurred at a school in Franklin. Allegedly, two juveniles, who were later arrested, had broken a window in the school's band room and had placed a device, consisting of dynamite, inside. The blast caused an estimated $2,000 property damage. The motive appears to have been mischief.

Michigan

A private residence in Grand Rapids was the target of an explosive bombing during the evening hours of December 13. The blast killed two occupants of the residence, seriously injured two others, and caused an estimated $25,000 property damage. The individuals responsible for the attack are unknown; however, investigation indicated the bombing may have been precipitated by the testimony of the owner of the residence at a recent trial.

New York

A pipe bomb exploded at the office of a union organization in New York City on December 30. The device had been placed inside a box, gift wrapped, and delivered by a messenger to an employee in the office. As the box was unwrapped, it exploded injuring two employees and causing an estimated $200,000 in property damage. The motive appears to be labor related, but no suspects have been identified.
